Linux Distributions and Applications Analysis During Linux Standard Base Development

> Denis Silakov Institute for System Programming, RAS *silakov@ispras.ru*

World of Linux

- Distributions
 - Hundreds
- Applications
 - Thousands
- Users
 - Millions

Application Development

Application Portability

Source level portability

- Application Program Interface (API) standards
- Programming languages standards
- Binary level portability
 - Application Binary Interface (ABI) standards
 - Standards on executable files, shared libraries, etc.

Linux Standard Base – Binary Standard

Linux Ecosystem

Distribution

- Libraries
- C++ Classes
- Binary Interfaces
- Commands
- Modules of Interpreted Languages

Standardization Criteria

- Presence in distributions
 - Only «major» distributions are taken into account
- Applications needs
- Maturity

How Much Data Do We Have?

- Typical Linux Distribution (1 DVD)
 - 1-3 thousands of libraries
 - 200-700 thousand of binary interfaces
- LSB 3.2
 - 50 libraries
 - ~39.000 binary interfaces
- Linux Applications
 - 2-30 libraries
 - ◆ 100 10.000 binary interfaces

Collect Data to a Storage

What Should Be Analysed

Executable and Linking Format (ELF)

- Shared object (library)
 - Soname
 - Exported symbols
- Executable
 - "Needed" libraries (sonames)
 - Required symbols

Executable and Linking Format (ELF)

- Shared object (library)
 - Soname
 - Exported symbols
- Executable
 - "Needed" libraries (sonames)
 - Required symbols
 - Ill No mapping between symbols and libraries

"Needed" Libraries Problems

- No symbols are used from needed library
 - Usually due to tools like *pkg-config*
- No needed libraries provide used symbols
 - Necessary libs are loaded as dependencies of other needed libs
- Loader «workarounds»
 - syscall, system, ...
 - libdl (dlsym, dladdr, ...)

Data Extraction

- binutils
 - readelf
 - objdump
 - ♦ nm
 - ۰...
- Analogues from elfutils
- libdl
- ۰...

Interpreted Languages

- Perl and Python modules only
- Data extraction
 - Perl: perldeps.pl from rpm
 - Python: modulefinder module

Applications Analysis Problems

 Different dependencies in different environments

- "import" statements under «if» or «try»
- Import of «all submodules» or «everything from a directory»

Applications Analysis Problems

 Different dependencies in different environments

- "import" statements under «if» or «try»
- Import of «all submodules» or «everything from a directory»

More ambiguous then binary files

Data Analysis

Analytical Tools

LSB Navigator

- Web tool upon the central database
- LSB ATK Manager
 - Standalone tool shipping database information
